## TEST REPORT

Test report no.: 1-1475/16-06-02

**DAkkS**  
Deutsche  
Akkreditierungsstelle  
D-PL-12076-01-01

### Testing laboratory

**CTC advanced GmbH**  
Untertuerkheimer Strasse 6 – 10  
66117 Saarbruecken / Germany  
Phone: + 49 681 5 98 - 0  
Fax: + 49 681 5 98 - 9075  
Internet: <http://www.ctcadvanced.com>  
e-mail: [mail@ctcadvanced.com](mailto:mail@ctcadvanced.com)

#### Accredited Testing Laboratory:

The testing laboratory (area of testing) is accredited according to DIN EN ISO/IEC 17025 (2005) by the Deutsche Akkreditierungsstelle GmbH (DAkkS). The accreditation is valid for the scope of testing procedures as stated in the accreditation certificate with the registration number: D-PL-12076-01-01

### Applicant

**Continental Automotive GmbH**  
Heinrich-Hertz-Str. 45  
78052 Villingen-Schwenningen / GERMANY  
Phone: +49 7721 94 72-0  
Fax: +49 772 167-792802  
Contact: Marion Grüner  
e-mail: [Marion.Gruener@continental-corporation.com](mailto:Marion.Gruener@continental-corporation.com)  
Phone: +49 772 167-2802

### Manufacturer

**Continental Automotiva Guadalajara Mexico, S.A. de C.V.**  
Periferico Sur #7999-D. Santa Maria Tequepexpan  
45601 Jalisco, Tlaquepaque / MEXICO

### Test standard/s

|                   |   |

For further applied test standards please refer to section 3 of this test report.

### Test Item

**Kind of test item:** Broadcast Receiver Subsystem  
**Model name:** Multiview Media Display  
**FCC ID:** 2AJW5MVRADIO  
**IC:** 21979-MVM RADIO  
**Frequency:** DTS band 2400 MHz to 2483.5 MHz  
**Technology tested:** Bluetooth®, +EDR  
**Antenna:** Internal antenna  
**Power supply:** 12.0 V DC by car battery  
**Temperature range:** -40°C to +60°C

This test report is electronically signed and valid without handwriting signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

### Test report authorized:

Rene Oelmann  
Lab Manager  
Radio Communications & EMC

### Test performed:

David Lang  
Lab Manager  
Radio Communications & EMC

## 2 General information

### 2.1 Notes and disclaimer

The test results of this test report relate exclusively to the test item specified in this test report. CTC advanced GmbH does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CTC advanced GmbH.

The testing service provided by CTC advanced GmbH has been rendered under the current "General Terms and Conditions for CTC advanced GmbH".

CTC advanced GmbH will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CTC advanced GmbH test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CTC advanced GmbH test report include or imply any product or service warranties from CTC advanced GmbH, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CTC advanced GmbH.

All rights and remedies regarding vendor's products and services for which CTC advanced GmbH has prepared this test report shall be provided by the party offering such products or services and not by CTC advanced GmbH.

In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

### 5.2 Additional information

The content of the following annexes is defined in the QA. It may be that not all of the listed annexes are necessary for this report, thus some values in between may be missing.

Test setup- and EUT-photos are included in test report:

1-1475/16-06-01\_AnnexA

1-1475/16-06-01\_AnnexB

1-1475/16-06-01\_AnnexD

## 6 Description of the test setup

Typically, the calibrations of the test apparatus are commissioned to and performed by an accredited calibration laboratory. The calibration intervals are determined in accordance with the DIN EN ISO/IEC 17025. In addition to the external calibrations, the laboratory executes comparison measurements with other calibrated test systems or effective verifications. Weekly chamber inspections and range calibrations are performed. Where possible, RF generating and signaling equipment as well as measuring receivers and analyzers are connected to an external high-precision 10 MHz reference (GPS-based or rubidium frequency standard).

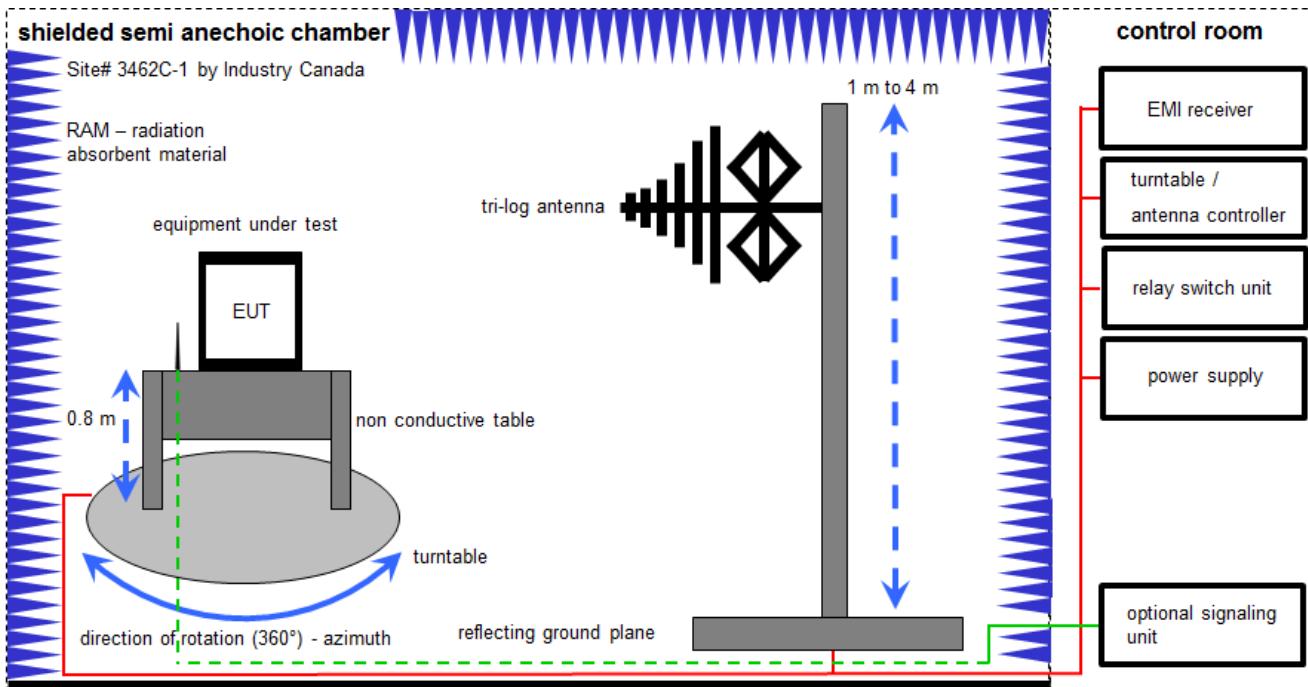

In order to simplify the identification of the equipment used at some special tests, some items of test equipment and ancillaries can be provided with an identifier or number in the equipment list below (Lab/Item).

### Agenda: Kind of Calibration

|       |  |     |  |
|-------|--|-----|--|
| k     | calibration / calibrated                   | EK  | limited calibration                                  |
| ne    | not required (k, ev, izw, zw not required) | zw  | cyclical maintenance (external cyclical maintenance) |
| ev    | periodic self verification                 | izw | internal cyclical maintenance                        |
| Ve    | long-term stability recognized             | g   | blocked for accredited testing                       |
| vlkl! | Attention: extended calibration interval   |     |  |
| NK!   | Attention: not calibrated                  | *)  | next calibration ordered / currently in progress     |

## 6.1 Shielded semi anechoic chamber

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 9 kHz to 1 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas are conform to specifications ANSI C63. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test setups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received. The wanted and unwanted emissions are received by spectrum analyzers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.

Measurement distance: tri-log antenna 10 meter

$$FS = UR + CL + AF$$

(FS-field strength; UR-voltage at the receiver; CL-loss of the cable; AF-antenna factor)

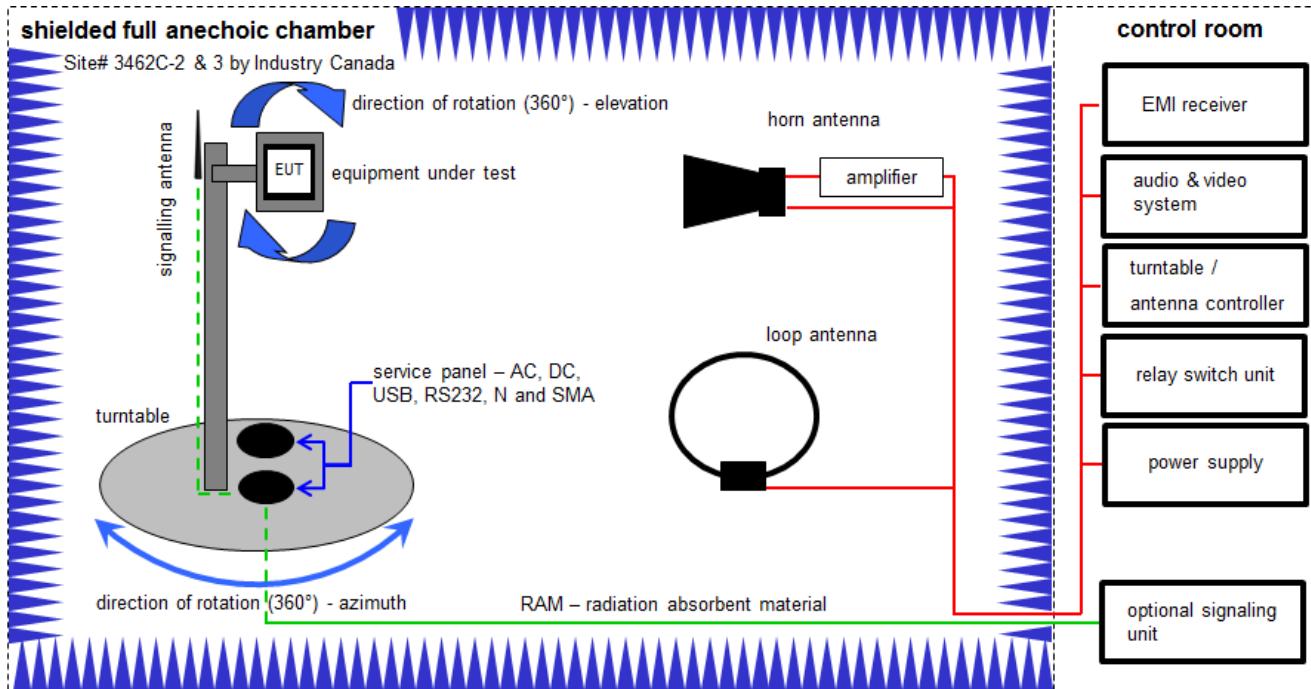

### Example calculation:

$$FS [dB\mu V/m] = 12.35 [dB\mu V/m] + 1.90 [dB] + 16.80 [dB/m] = 31.05 [dB\mu V/m] (35.69 \mu V/m)$$

### Equipment table:

## 6.2 Shielded fully anechoic chamber

Measurement distance: horn antenna 3 meter; loop antenna 3 meter

FS = UR + CA + AF

(FS-field strength; UR-voltage at the receiver; CA-loss of the signal path; AF-antenna factor)

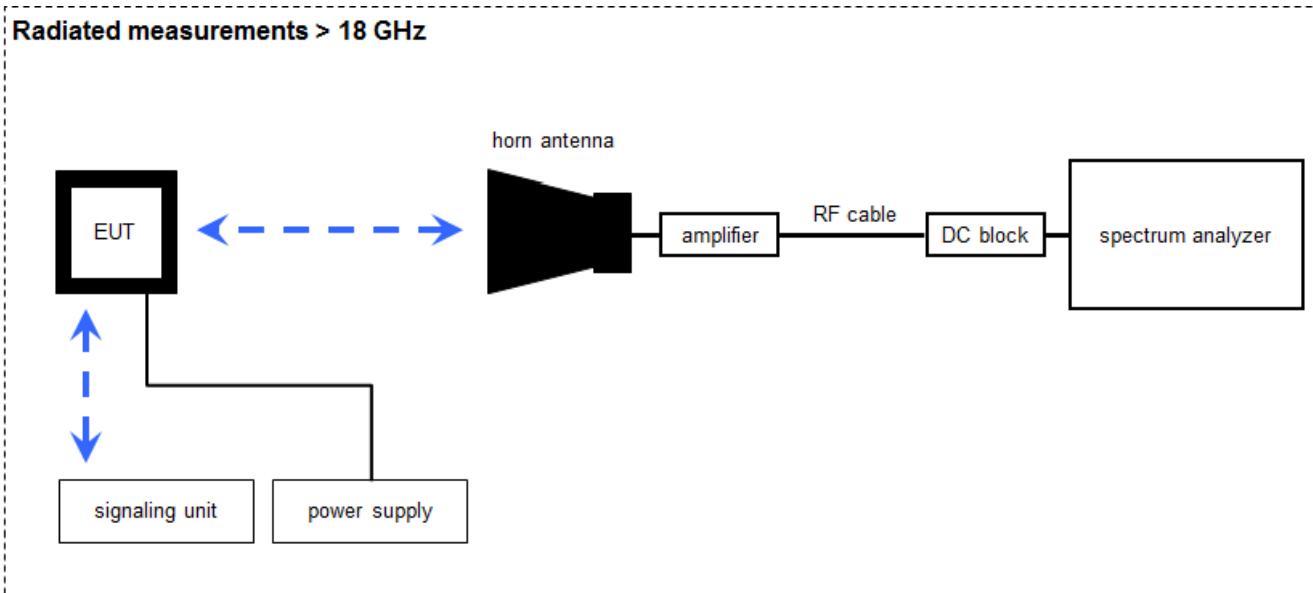

Example calculation:

$$\text{FS [dB}\mu\text{V/m]} = 40.0 \text{ [dB}\mu\text{V/m]} + (-35.8) \text{ [dB]} + 32.9 \text{ [dB/m]} = 37.1 \text{ [dB}\mu\text{V/m]} (71.61 \mu\text{V/m})$$

### Equipment table:

### 6.3 Radiated measurements > 18 GHz

Measurement distance: horn antenna 25 cm

FS = UR + CA + AF

(FS-field strength; UR-voltage at the receiver; CA-loss signal path & distance correction; AF-antenna factor)

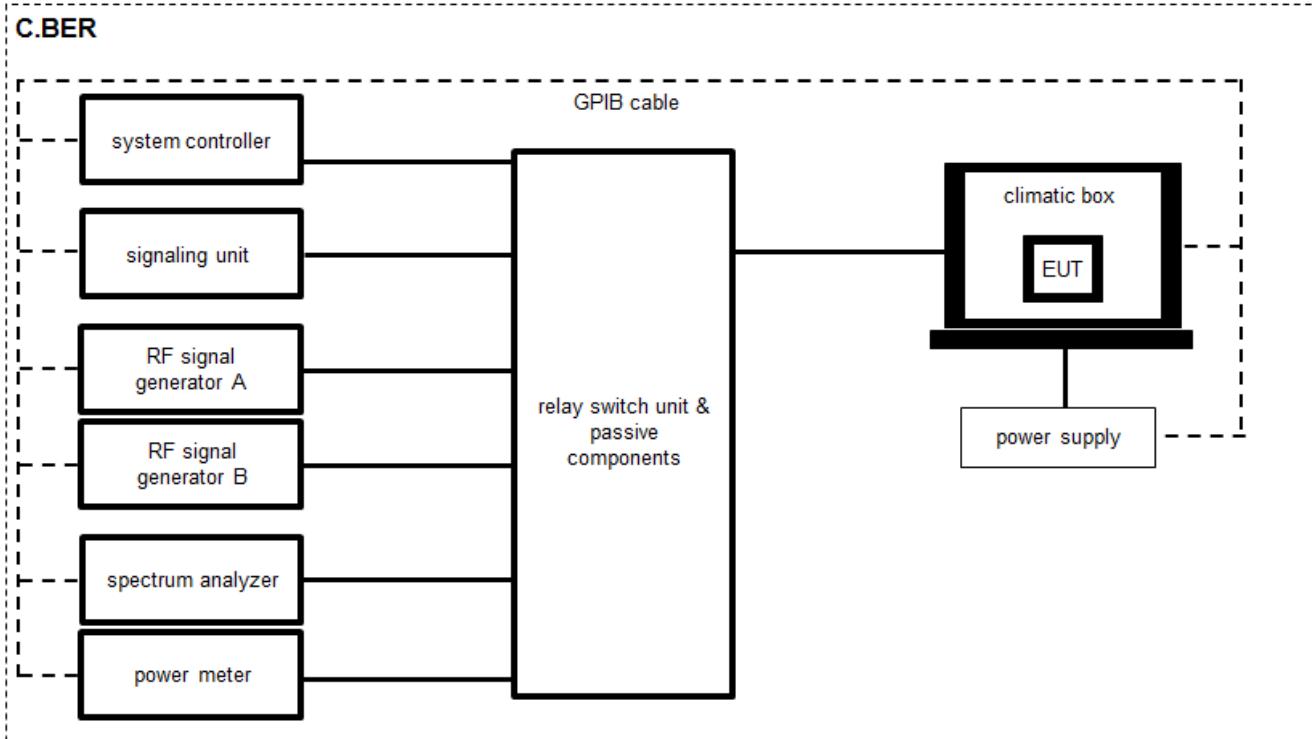

Example calculation:

$$\text{FS [dB}\mu\text{V/m]} = 40.0 \text{ [dB}\mu\text{V/m]} + (-60.1) \text{ [dB]} + 36.74 \text{ [dB/m]} = 16.64 \text{ [dB}\mu\text{V/m]} (6.79 \mu\text{V/m})$$

## 6.4 Conducted measurements C.BER system

OP = AV + CA  
 (OP-output power; AV-analyzer value; CA-loss signal path)

Example calculation:  
 $OP \text{ [dBm]} = 6.0 \text{ [dBm]} + 11.7 \text{ [dB]} = 17.7 \text{ [dBm]} (58.88 \text{ mW})$

## 7 Sequence of testing

### 7.1 Sequence of testing radiated spurious 9 kHz to 30 MHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) – see test details.
- EUT is set into operation.

#### Premereasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna height is 1.5 m.
- At each turntable position the analyzer sweeps with positive-peak detector to find the maximum of all emissions.

#### Final measurement

- Identified emissions during the premeasurement are maximized by the software by rotating the turntable from 0° to 360°. In case of the 2-axis positioner is used the elevation axis is also rotated from 0° to 360°.
- The final measurement is done in the position (turntable and elevation) causing the highest emissions with quasi-peak (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, correction factor, margin to the limit and limit will be recorded. A plot with the graph of the premeasurement and the limit is stored.

## 7.2 Sequence of testing radiated spurious 30 MHz to 1 GHz

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 10 m or 3 m (see ANSI C 63.4) – see test details.
- EUT is set into operation.

### Premereasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height changes from 1 m to 3 m.
- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

### Final measurement

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximize the peaks by changing turntable position ± 45° and antenna height between 1 and 4 m.
- The final measurement is done with quasi-peak detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

## 7.3 Sequence of testing radiated spurious 1 GHz to 18 GHz

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) – see test details.
- EUT is set into operation.

### Premereasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height is 1.5 m.
- At each turntable position and antenna polarization the analyzer sweeps with positive peak detector to find the maximum of all emissions.

### Final measurement

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximizes the peaks by rotating the turntable from 0° to 360°. This measurement is repeated for different EUT-table positions (0° to 150° in 30°-steps) and for both antenna polarizations.
- The final measurement is done in the position (turntable, EUT-table and antenna polarization) causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, EUT-table position, antenna polarization, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

## 7.4 Sequence of testing radiated spurious above 18 GHz

### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet.
- The measurement distance is as appropriate (e.g. 0.5 m).
- The EUT is set into operation.

### Premeasurement

- The test antenna is handheld and moved carefully over the EUT to cover the EUT's whole sphere and different polarizations of the antenna.

### Final measurement

- The final measurement is performed at the position and antenna orientation causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement and the limit is stored.

## 8 Measurement uncertainty

| Measurement uncertainty                                  |  |
|--|--|
| Test case  | Uncertainty                              |
| Antenna gain   | ± 3 dB                                   |
| Carrier frequency separation                             | ± 21.5 kHz                               |
| Number of hopping channels                               | -/-                                      |
| Time of occupancy  | According BT Core specification          |
| Spectrum bandwidth                                       | ± 21.5 kHz absolute; ± 15.0 kHz relative |
| Maximum output power                                     | ± 1 dB                                   |
| Detailed conducted spurious emissions @ the band edge    | ± 1 dB                                   |
| Band edge compliance radiated                            | ± 3 dB                                   |
| Spurious emissions conducted                             | ± 3 dB                                   |
| Spurious emissions radiated below 30 MHz                 | ± 3 dB                                   |
| Spurious emissions radiated 30 MHz to 1 GHz              | ± 3 dB                                   |
| Spurious emissions radiated 1 GHz to 12.75 GHz           | ± 3.7 dB                                 |
| Spurious emissions radiated above 12.75 GHz              | ± 4.5 dB                                 |
| Spurious emissions conducted below 30 MHz (AC conducted) | ± 2.6 dB                                 |

**Note:** C = Compliant; NC = Not compliant; NA = Not applicable; NP = Not performed  
 Conducted test results leveraged from the initial test report 1-1475/16-03-03.

## 10 Additional comments

The Bluetooth® word mark and logos are owned by the Bluetooth SIG Inc. and any use of such marks by CTC advanced GmbH is under license.

Reference documents: Test report 1.1475/16-03-03 issued by Cetecom ICT Services GmbH, 2016-10-05.

Special test descriptions: None

Configuration descriptions: TX tests: were performed with x-DH5 packets and static PRBS pattern payload.  
RX/Standby tests: BT test mode enabled, scan enabled, TX Idle

Test mode:  Bluetooth Test mode loop back enabled (EUT is controlled over CBT/CMU/CMW)  
 Special software is used.  
EUT is transmitting pseudo random data by itself

Antennas and transmit operating modes:  Operating mode 1 (single antenna)  
- Equipment with 1 antenna,  
- Equipment with 2 diversity antennas operating in switched diversity mode by which at any moment in time only 1 antenna is used,  
- Smart antenna system with 2 or more transmit/receive chains, but operating in a mode where only 1 transmit/receive chain is used)

## 11 Measurement results

### 11.1 Antenna gain

**Measurement:**

The antenna gain of the complete system is calculated by the difference of radiated power in EIRP and the conducted power of the module. For normal Bluetooth® devices, the GFSK modulation is used.

| Measurement parameters  |   |
|-------------------------|---|
| Detector                | Peak  |
| Sweep time              | Auto  |
| Resolution bandwidth    | 3 MHz   |
| Video bandwidth         | 3 MHz   |

## 11.2 Carrier frequency separation

### Description:

Measurement of the carrier frequency separation of a hopping system. The carrier frequency separation is constant for all modulation-modes. We use GFSK-modulation to show compliance. EUT in hopping mode.

| Measurement parameters  |                      |
|-------------------------|----------------------|
| Detector                | Peak                 |
| Sweep time              | Auto                 |
| Resolution bandwidth    | 100 kHz              |
| Video bandwidth         | 300 kHz              |
| Span                    | 4 MHz                |
| Trace mode              | Max hold             |
| Test setup              | See sub clause 7.4 A |
| Measurement uncertainty | See sub clause 9     |

### Limits:

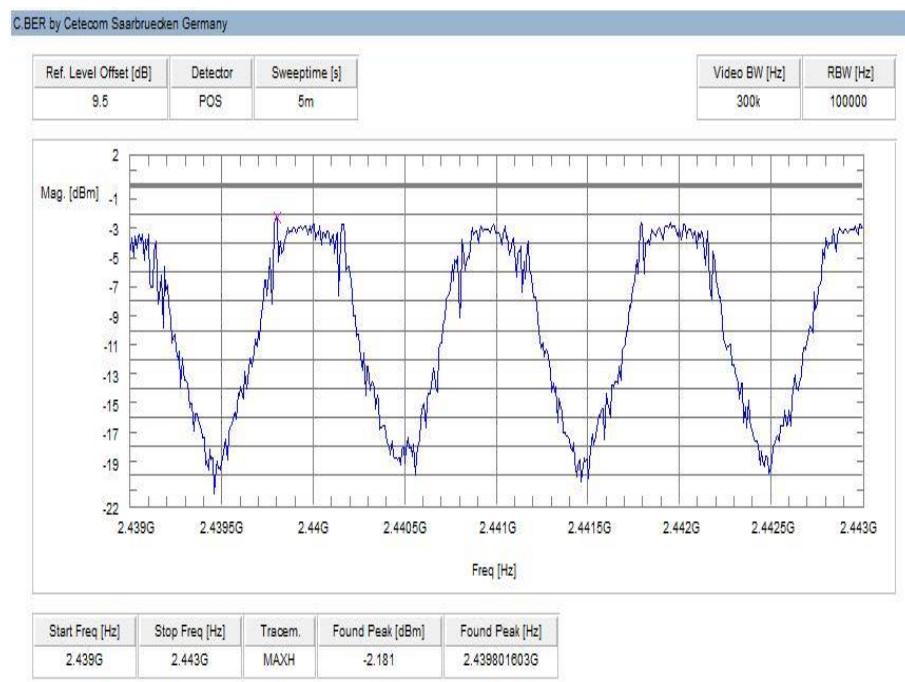

| FCC   | IC |
|---|----|
| Carrier frequency separation  |    |
| Minimum 25 kHz or two-thirds of the 20 dB bandwidth of the hopping system whichever is greater. |    |

### Result:

|                              |         |
|------------------------------|---------|
| Carrier frequency separation | ~ 1 MHz |
|------------------------------|---------|

## 11.4 Time of occupancy (dwell time)

### Measurement:

For Bluetooth® devices no measurements mandatory depending on the fixed requirements according to the Bluetooth® Core Specifications!

### For Bluetooth® devices:

The channel staying time of 0.4 s within a 31.6 second period in data mode is constant for Bluetooth® devices and independent from the packet type (packet length). The calculation for a 31.6 second period is as follows:

$$\text{Channel staying time} = \text{time slot length} * \text{hop rate} / \text{number of hopping channels} * 31.6 \text{ s}$$

Example for a DH1 packet (with a maximum length of one time slot)

$$\text{Channel staying time} = 625 \mu\text{s} * 1600 * 1/\text{s} / 79 * 31.6 \text{ s} = 0.4 \text{ s} (\text{in a } 31.6 \text{ s period})$$

For multi-slot packets the hopping is reduced according to the length of the packet.

Example for a DH3 packet (with a maximum length of three time slots)

$$\text{Channel staying time} = 3 * 625 \mu\text{s} * 1600 / 3 * 1/\text{s} / 79 * 31.6 \text{ s} = 0.4 \text{ s} (\text{in a } 31.6 \text{ s period})$$

Example for a DH5 packet (with a maximum length of five time slots)

$$\text{Channel staying time} = 5 * 625 \mu\text{s} * 1600 / 5 * 1/\text{s} / 79 * 31.6 \text{ s} = 0.4 \text{ s} (\text{in a } 31.6 \text{ s period})$$

This is according the Bluetooth® Core Specification V2.0 & V2.1 & V3.0 & V4.0 (+ critical errata) for all Bluetooth® devices and all modulations.

### The following table shows the relations:

| Packet Size | Pulse Width [ms] * | Max. number of transmissions per channel in 31.6 sec |
|-------------|--------------------|--|
| DH1         | 0.366              | 640  |
| DH3         | 1.622              | 214  |
| DH5         | 2.870              | 128  |

\* according Bluetooth® specification

### Results:

| Packet Size | Pulse Width [ms]* | Max. number of transmissions in 31.6 sec | Dwell time [Pulse width * Number of transmissions] |
|-------------|-------------------|--|--|
| DH1         | 0.366             | 640                                      | 234.2 ms   |
| DH3         | 1.622             | 214                                      | 347.1 ms   |
| DH5         | 2.870             | 128                                      | 367.4 ms   |

### Limits:

| FCC   | IC |
|---|----|
| Time of occupancy (dwell time)  |    |
| The frequency hopping operation shall have an average time of occupancy on any frequency not exceeding 0.4 seconds within a duration in seconds equal to the number of hopping frequencies multiplied by 0.4. |    |

## 11.5 Spectrum bandwidth of a FHSS system

### Description:

Measurement of the 20dB bandwidth and 99% bandwidth of the modulated signal. The measurement is performed according to the "Measurement Guidelines" (DA 00-705, March 30, 2000). EUT in single channel mode.

| Measurement parameters  |                      |
|-------------------------|----------------------|
| Detector                | Peak                 |
| Sweep time              | Auto                 |
| Resolution bandwidth    | 30 kHz               |
| Video bandwidth         | 100 kHz              |
| Span                    | 3 MHz                |
| Trace mode              | Max hold             |
| Test setup              | See sub clause 7.4 A |
| Measurement uncertainty | See sub clause 9     |

### Limits:

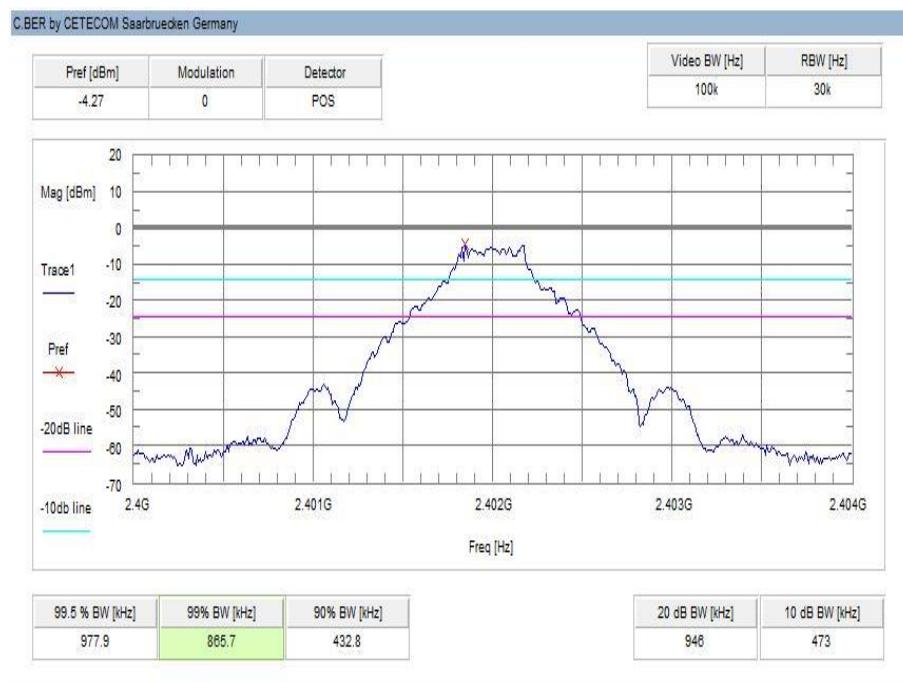

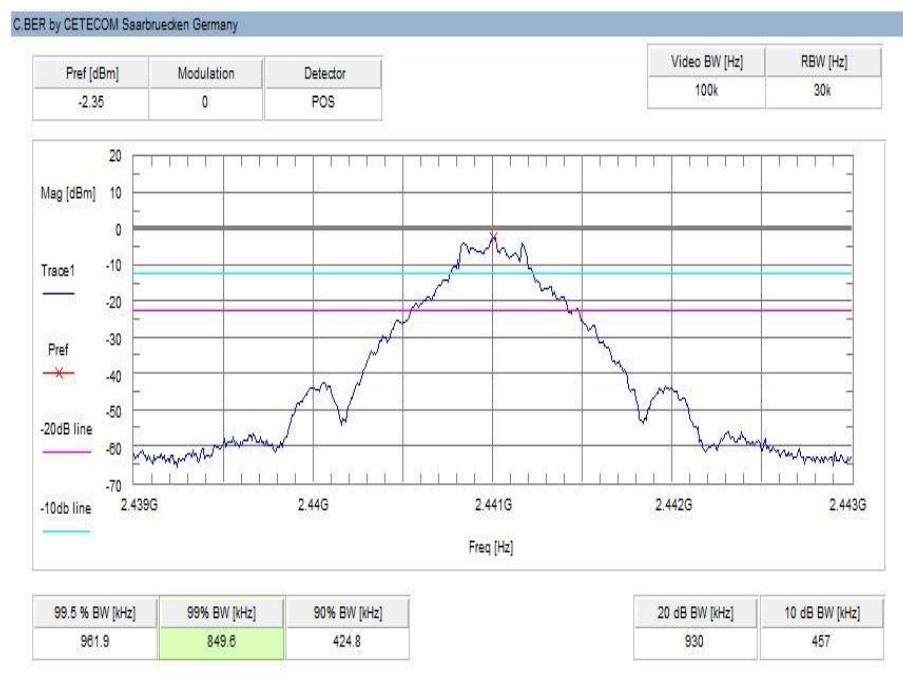

| FCC  | IC |
|--|----|
| Spectrum bandwidth of a FHSS system                          |    |

## 11.6 Maximum output power

### Description:

Measurement of the maximum output power conducted and radiated. EUT in single channel mode. The measurement is performed according to the ANSI C63.10.

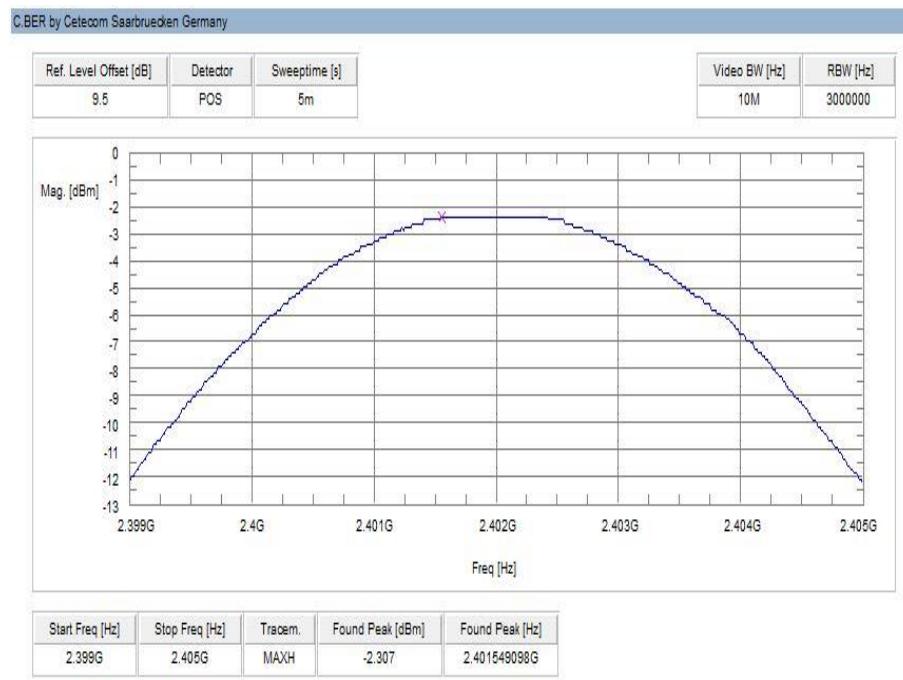

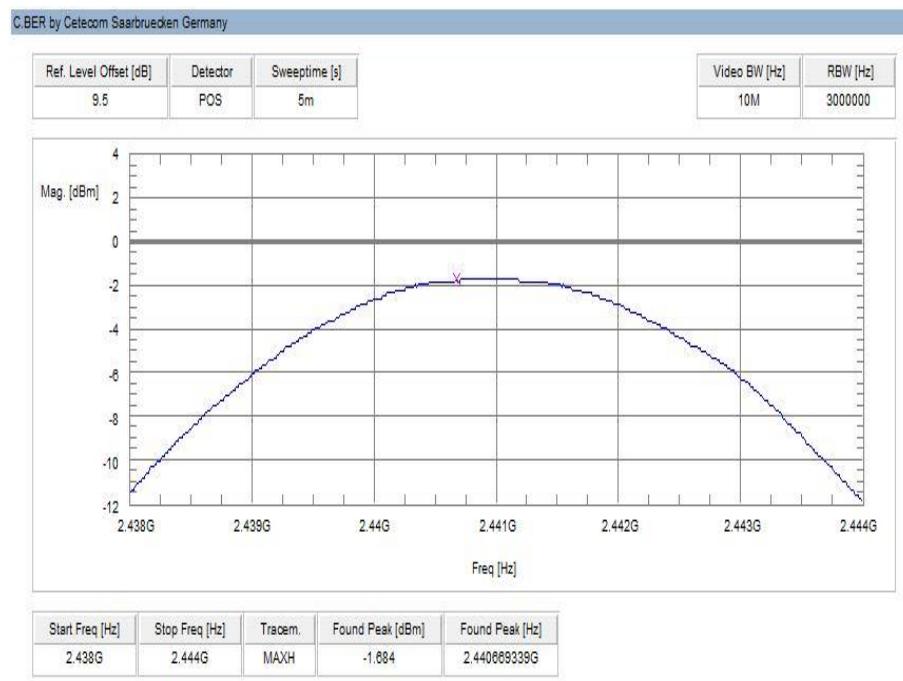

| Measurement parameters  |                      |
|-------------------------|----------------------|
| Detector                | Peak                 |
| Sweep time              | Auto                 |
| Resolution bandwidth    | 3 MHz                |
| Video bandwidth         | 10 MHz               |
| Span                    | 6 MHz                |
| Trace mode              | Max hold             |
| Test setup              | See sub clause 7.4 A |
| Measurement uncertainty | See sub clause 9     |

### Limits:

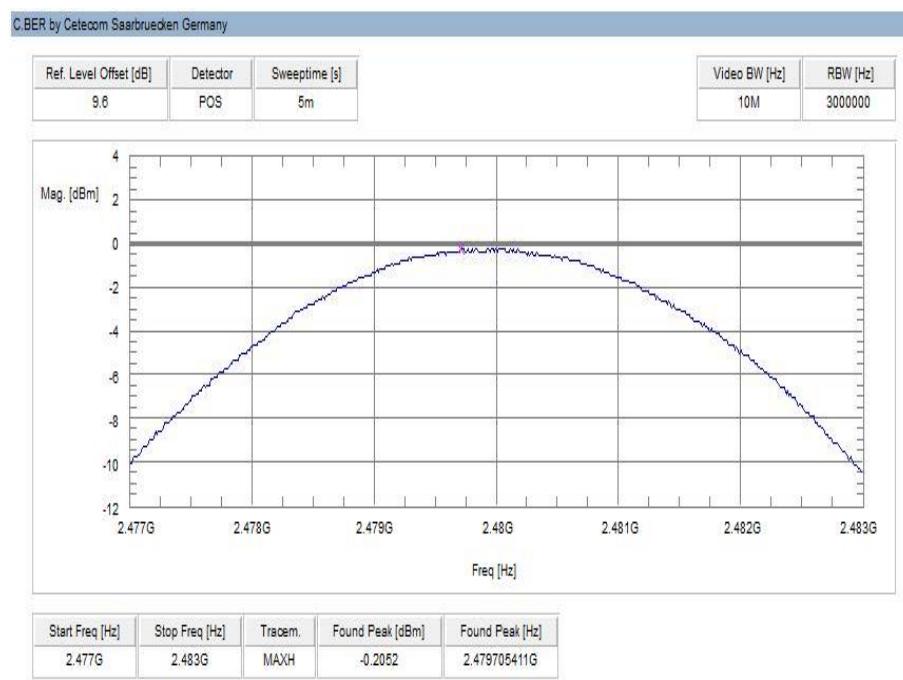

| FCC  | IC |
|--|----|
| Maximum output power   |    |
| [Conducted: 0.125 W – antenna gain max. 6 dBi]<br>Systems using more than 75 hopping channels:<br>Conducted: 1.0 W – antenna gain max. 6 dBi |    |

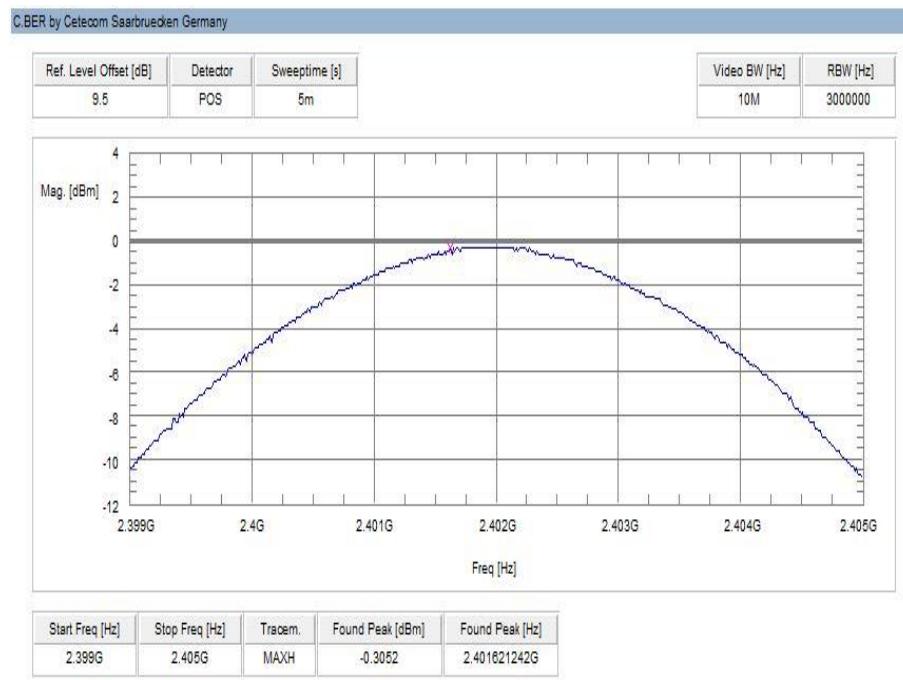

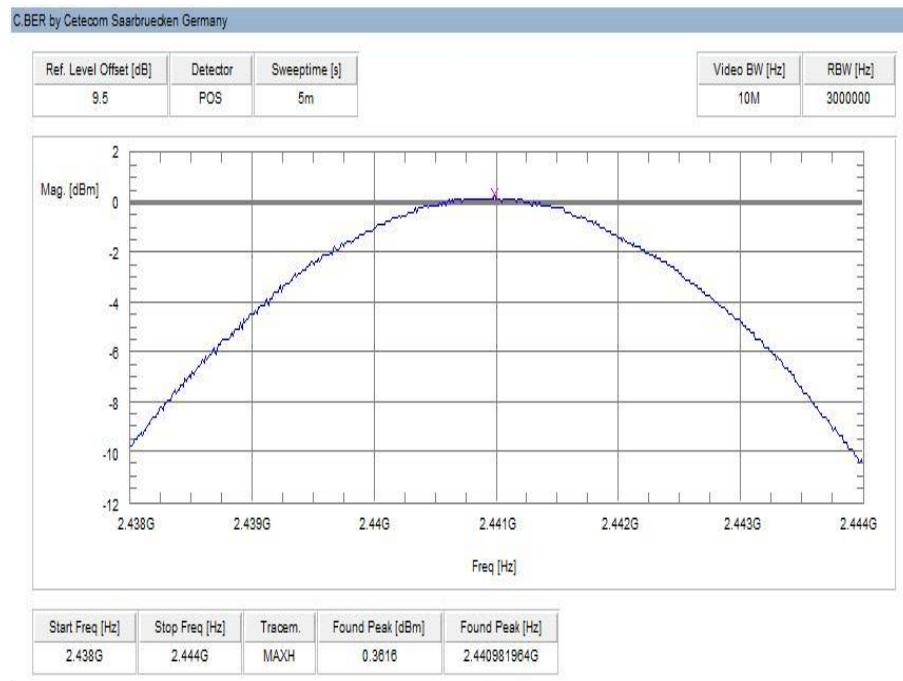

### Results:

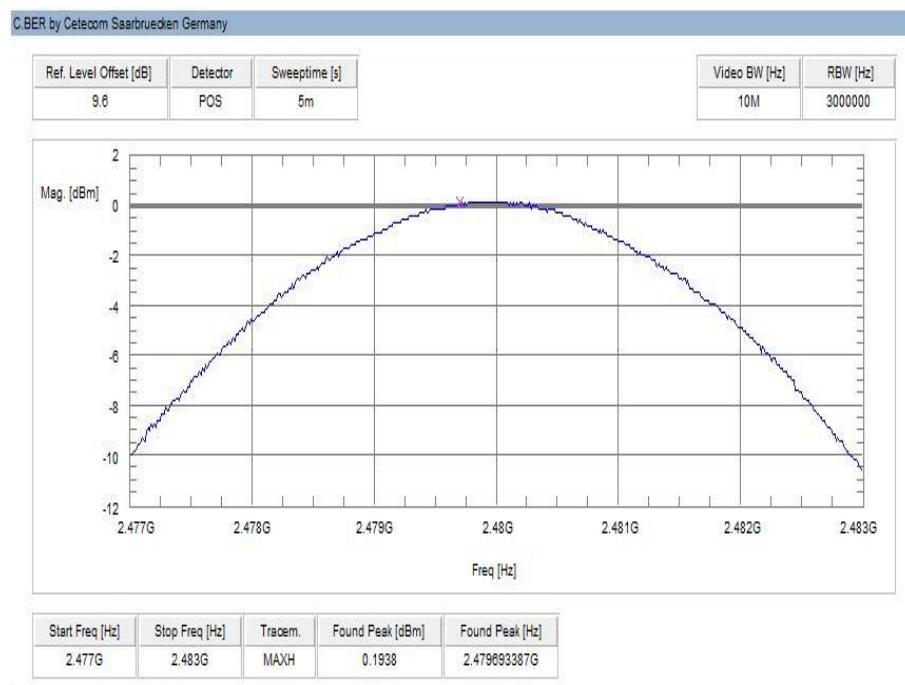

| Modulation | Maximum output power conducted [dBm] |          |          |

## 11.7 Detailed spurious emissions @ the band edge - conducted

### Description:

Measurement of the conducted band edge compliance. EUT is measured at the lower and upper band edge in single channel and hopping mode. The measurement is repeated for all modulations.

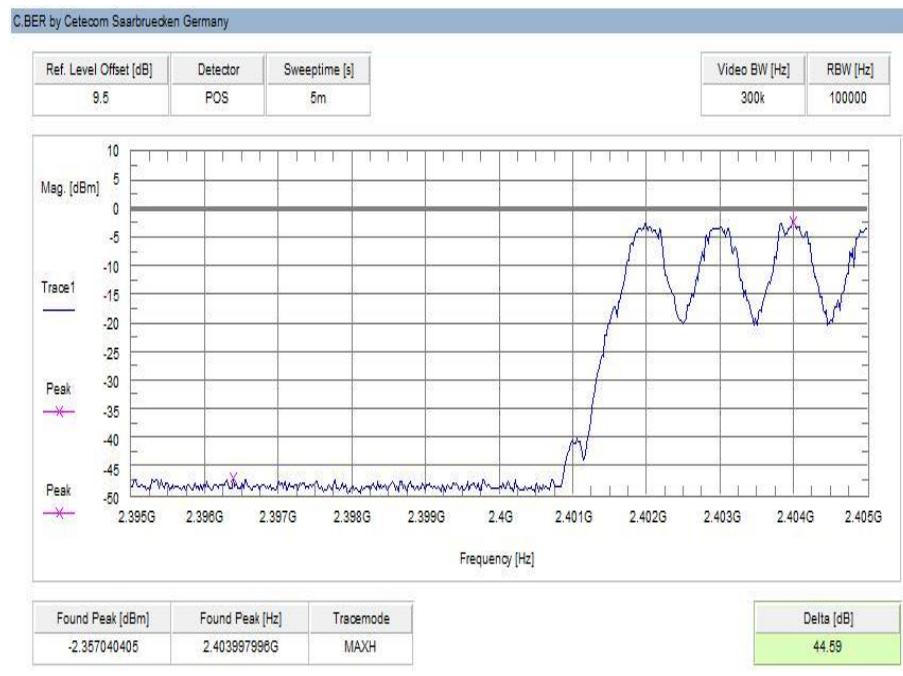

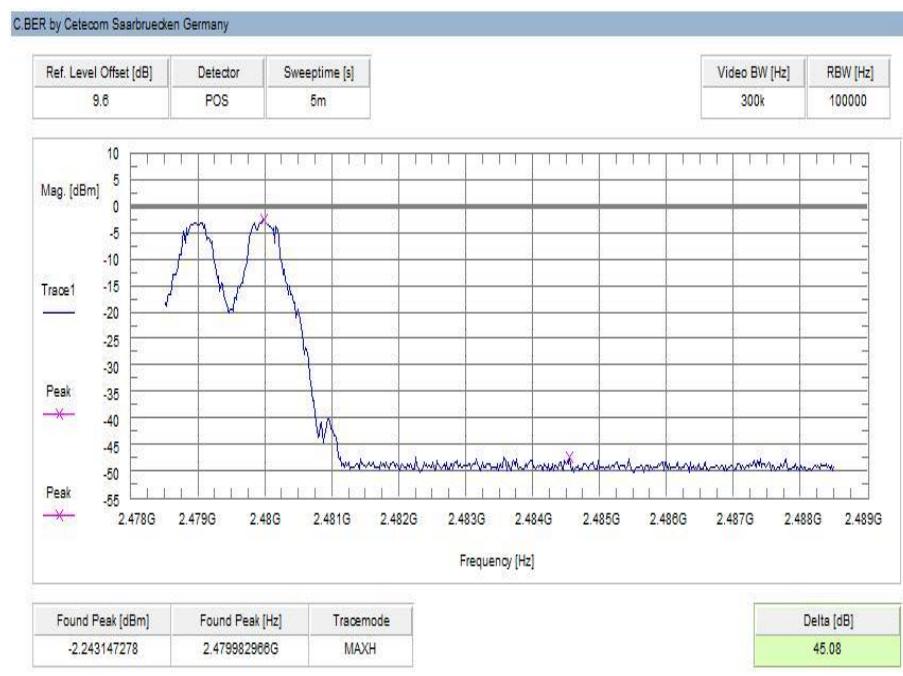

| Measurement parameters  |  |
|-------------------------|--|
| Detector                | Peak   |
| Sweep time              | Auto   |
| Resolution bandwidth    | 100 kHz  |
| Video bandwidth         | 300 kHz / 500 kHz  |
| Span                    | Lower Band Edge: 2395 – 2405 MHz<br>Upper Band Edge: 2478 – 2489 MHz |
| Trace mode              | Max hold   |
| Test setup              | See sub clause 7.4 A   |
| Measurement uncertainty | See sub clause 9   |

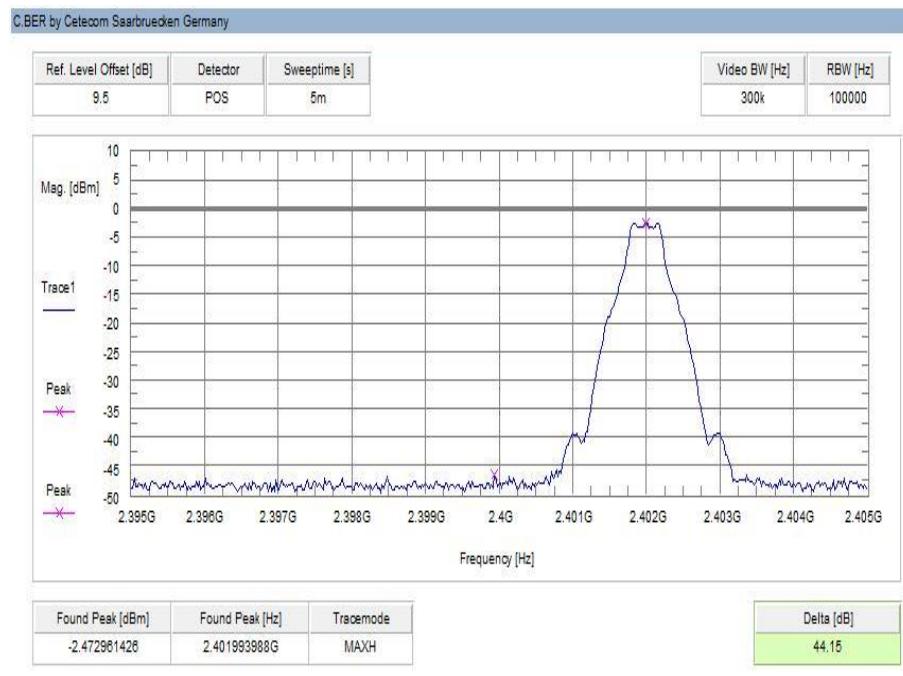

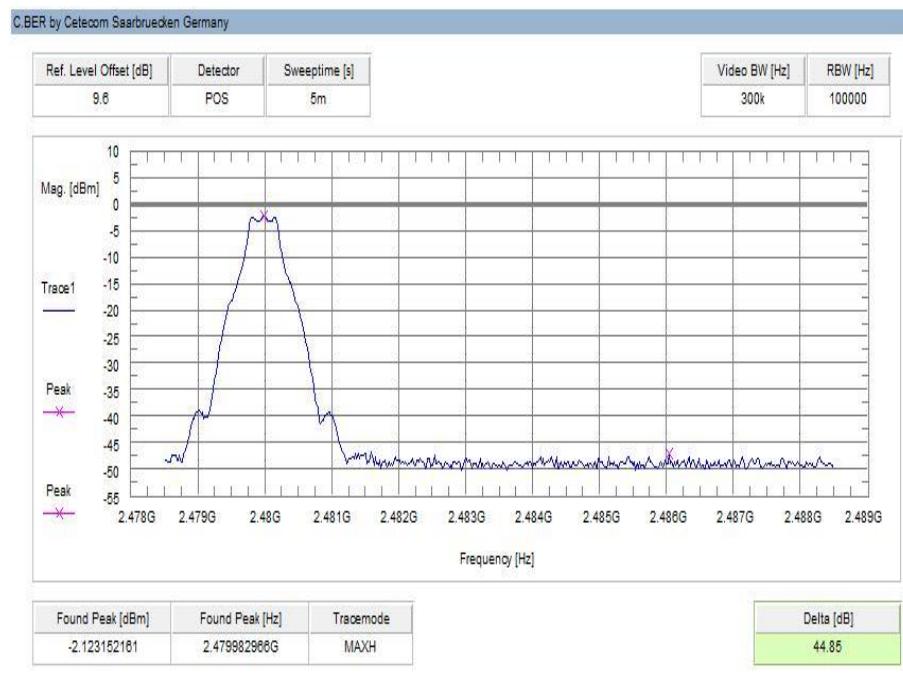

### Limits:

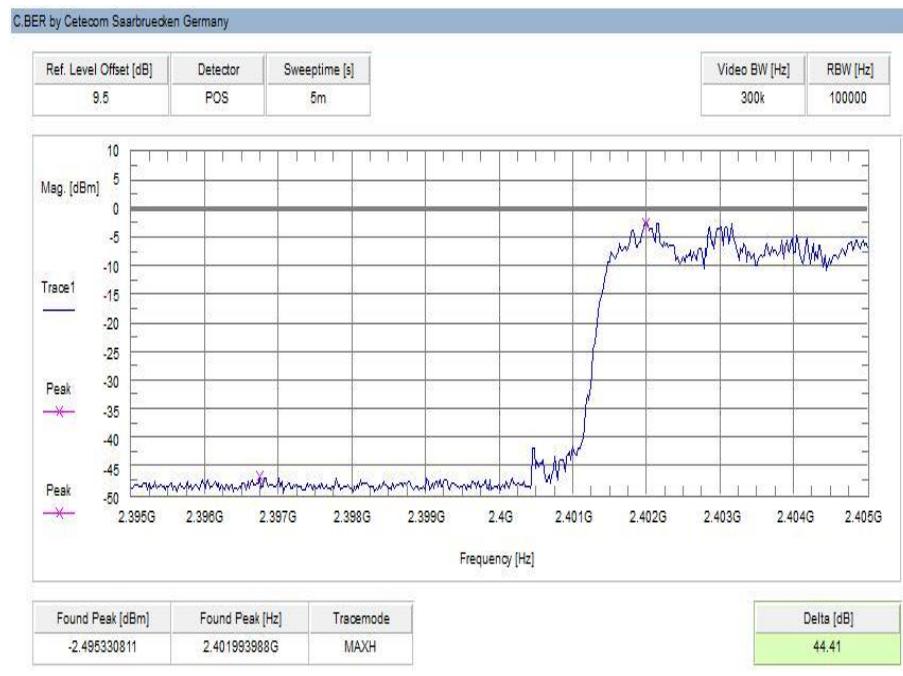

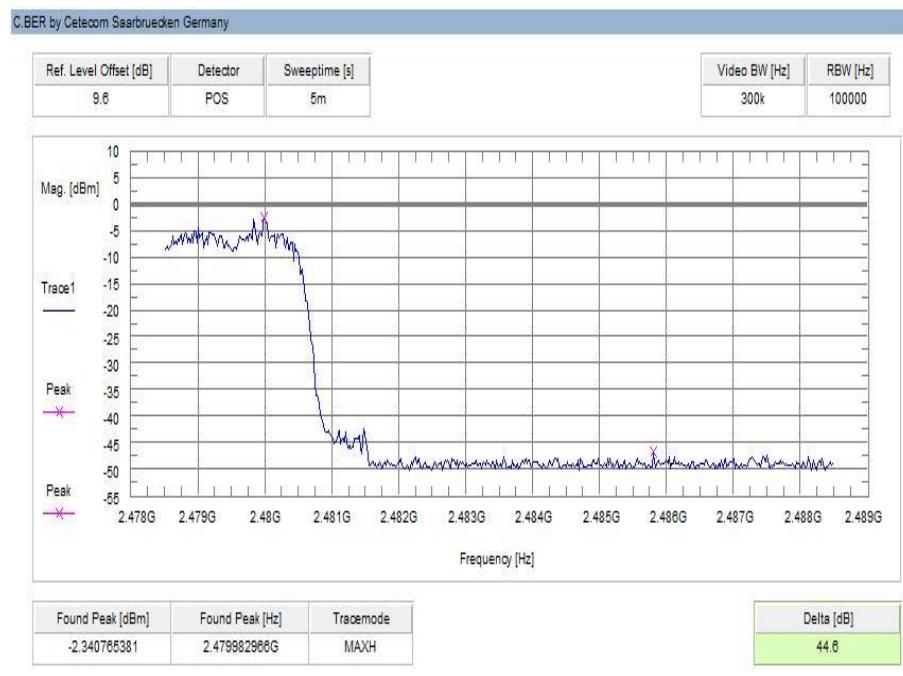

| FCC   | IC |
|---|----|
| In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. |    |

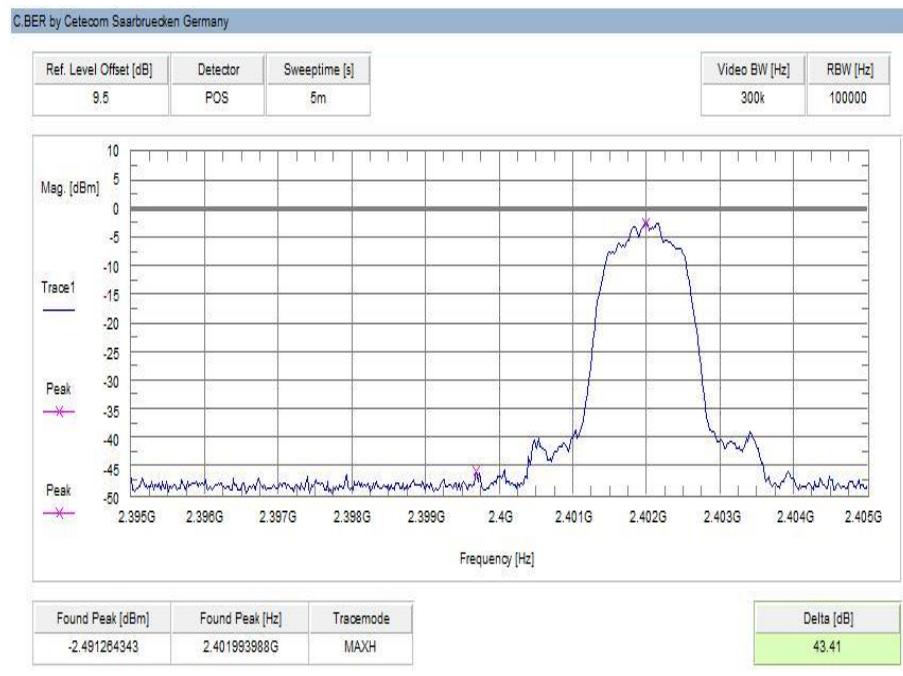

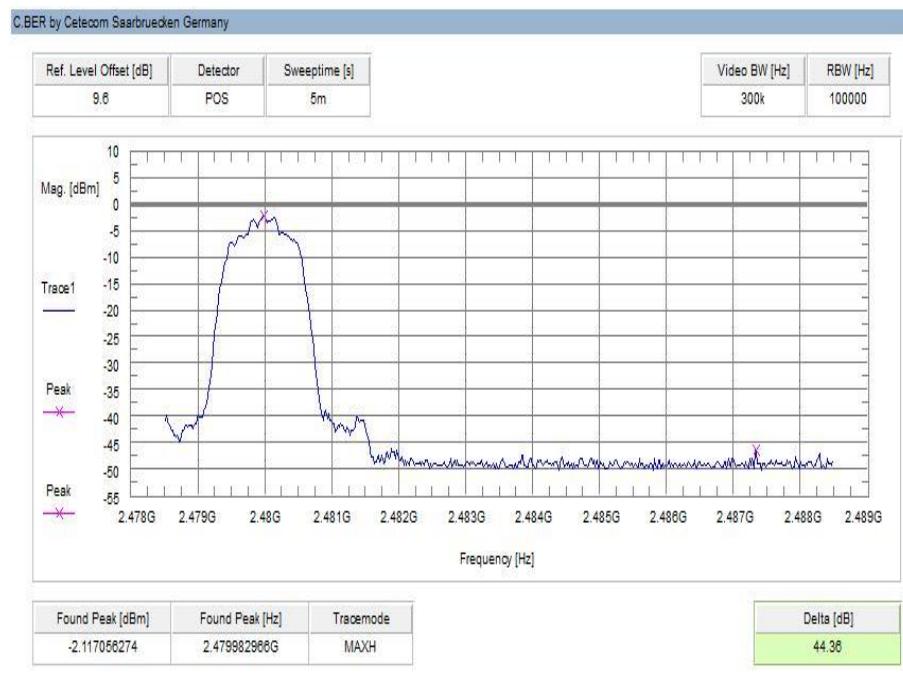

### Results:

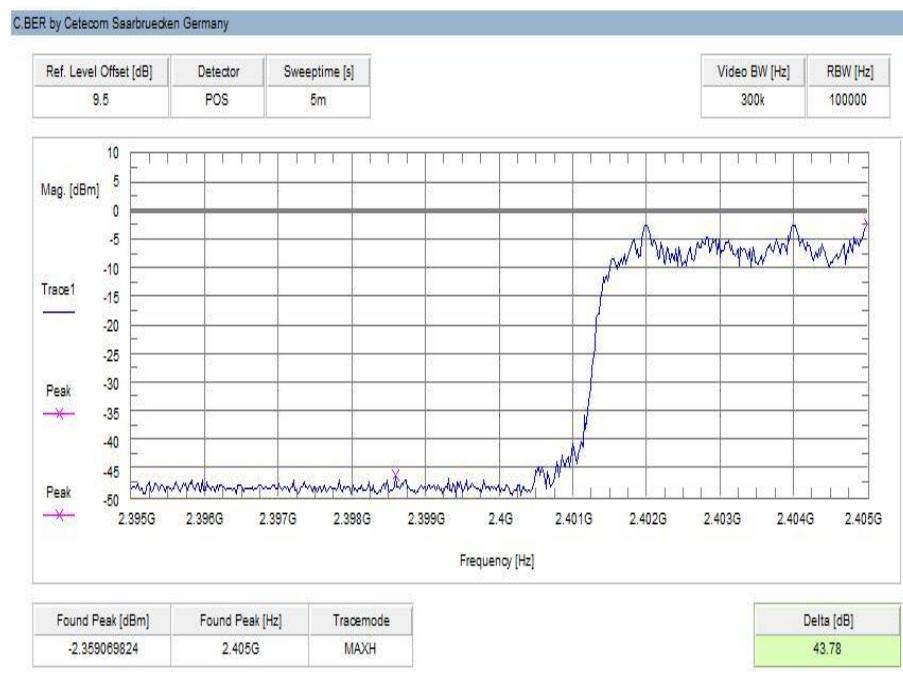

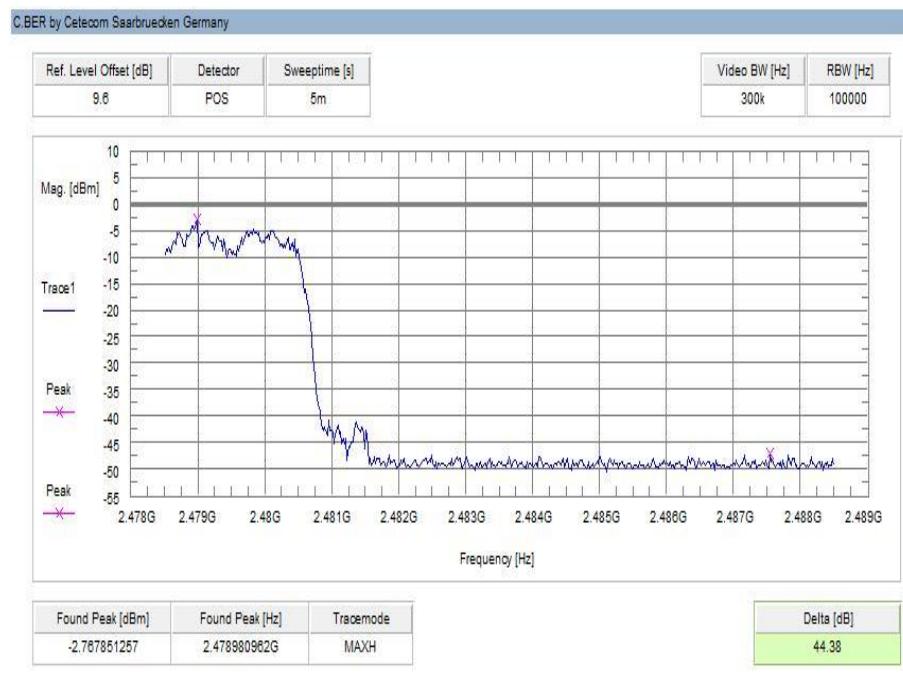

| Scenario                      | Spurious band edge conducted [dB] |            |         |
|-------------------------------|-----------------------------------|------------|---------|
|                               | GFSK                              | Pi/4 DQPSK | 8DPSK   |
| Lower band edge – hopping off | > 20 dB                           | > 20 dB    | > 20 dB |
| Lower band edge – hopping on  | > 20 dB                           | > 20 dB    | > 20 dB |
| Upper band edge – hopping off | > 20 dB                           | > 20 dB    | > 20 dB |
| Upper band edge – hopping on  | > 20 dB                           | > 20 dB    | > 20 dB |

## 11.8 Band edge compliance radiated

### Description:

Measurement of the radiated band edge compliance. The EUT is turned in the position that results in the maximum level at the band edge. Then a sweep over the corresponding restricted band is performed. The EUT is set to single channel mode and the transmit channel is channel 00 for the lower restricted band and channel 78 for the upper restricted band. The measurement is repeated for all modulations. Measurement distance is 3m.

| Measurement parameters  |  |
|-------------------------|--|
| Detector                | Peak / RMS   |
| Sweep time              | Auto   |
| Resolution bandwidth    | 1 MHz  |
| Video bandwidth         | 3 MHz  |
| Span                    | Lower Band: 2370 – 2400 MHz<br>Upper Band: 2480 – 2500 MHz |
| Trace mode              | Max hold   |
| Test setup              | See sub clause 7.2 B                                       |
| Measurement uncertainty | See sub clause 9   |

### Limits:

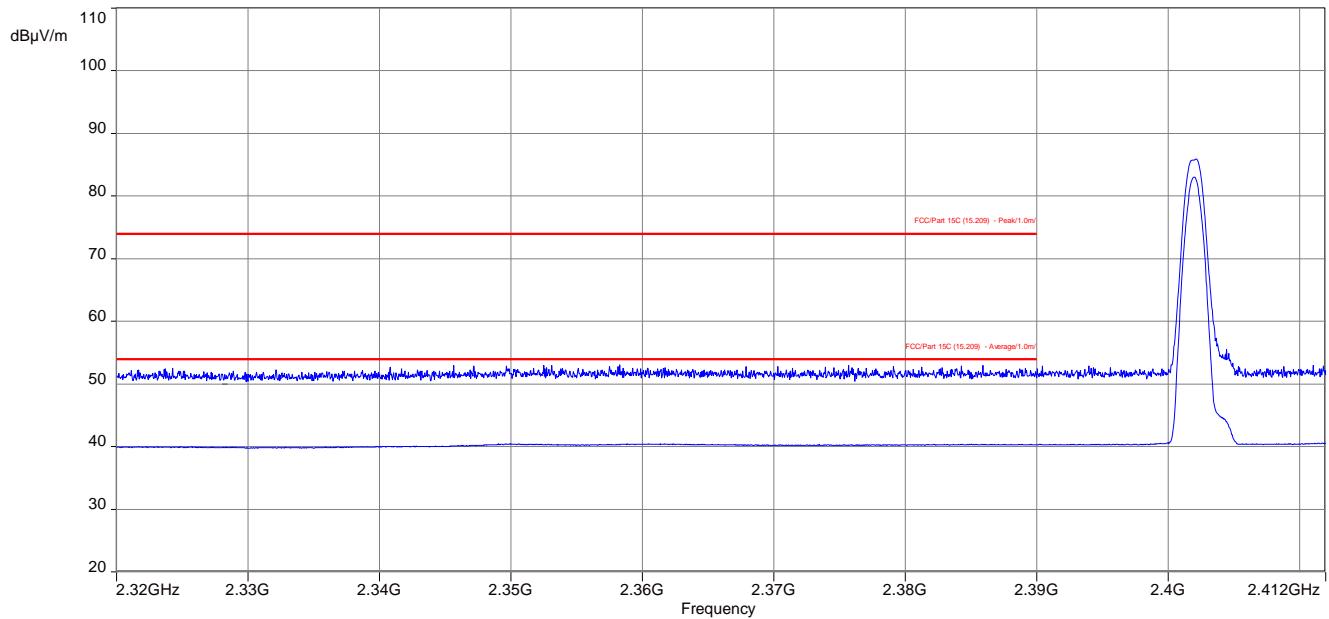

| FCC  | IC |
|--|----|
| Band edge compliance radiated  |    |
| In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 5.205(c)). |    |
| 54 dB $\mu$ V/m AVG<br>74 dB $\mu$ V/m Peak  |    |

### Results:

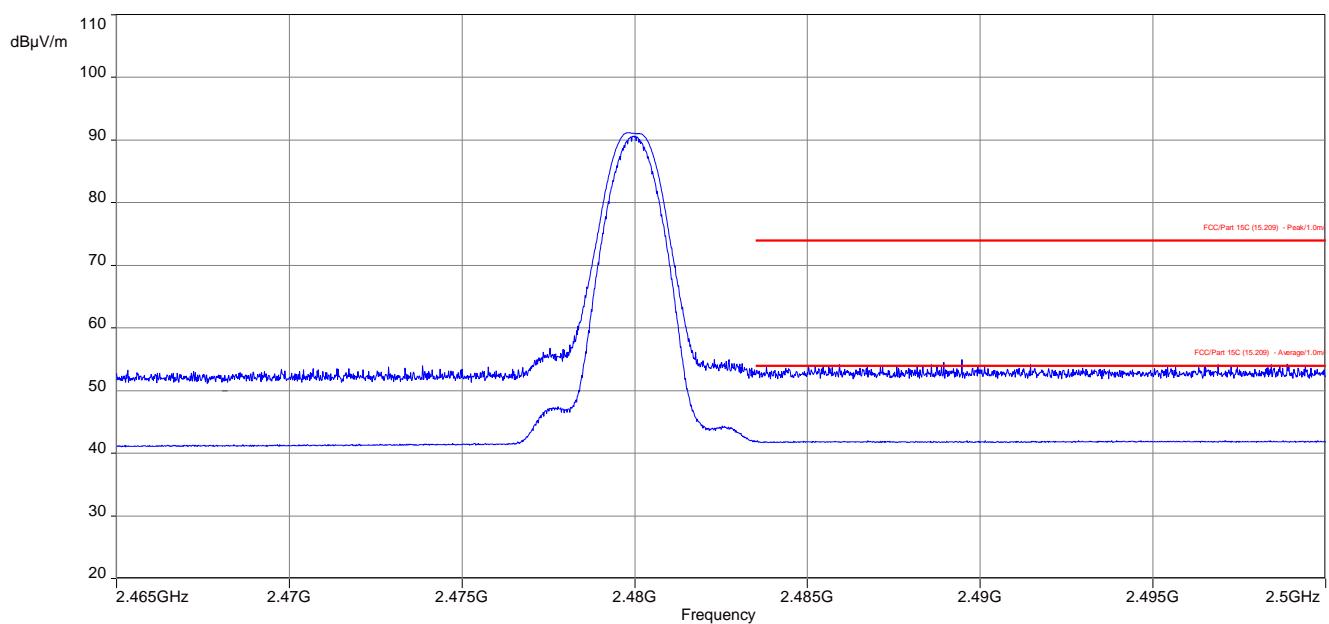

| Scenario              | Band edge compliance radiated [dB $\mu$ V/m] |                    |                    |
|-----------------------|--|--------------------|--------------------|
|                       | GFSK   | Pi/4 DQPSK         | 8DPSK              |
| Lower restricted band | < 54 AVG / < 74 PP                           | < 54 AVG / < 74 PP | < 54 AVG / < 74 PP |
| Upper restricted band | < 54 AVG / < 74 PP                           | < 54 AVG / < 74 PP | < 54 AVG / < 74 PP |

## 11.9 Spurious emissions conducted

### Description:

Measurement of the conducted spurious emissions in transmit mode. The EUT is set to single channel mode and the transmit channel is channel 00, channel 39 and channel 78. The measurement is repeated for all modulations.

| Measurement parameters  |                      |
|-------------------------|----------------------|
| Detector                | Peak                 |
| Sweep time              | Auto                 |
| Resolution bandwidth    | 100 kHz              |
| Video bandwidth         | 300 kHz              |
| Span                    | 9 kHz to 25 GHz      |
| Trace mode              | Max hold             |
| Test setup              | See sub clause 7.4 A |
| Measurement uncertainty | See sub clause 9     |

### Limits:

| FCC  | IC |
|--|----|
| TX spurious emissions conducted  |    |
| In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required |    |

**Results:**

## 11.10 Spurious emissions radiated below 30 MHz

### Description:

Measurement of the radiated spurious emissions in transmit mode below 30 MHz. The EUT is set to single channel mode and the transmit channels are 00; 39 and 78. The measurement is performed in the mode with the highest output power. The limits are recalculated to a measurement distance of 3 m according the ANSI C63.10.

| Measurement parameters  |  |
|-------------------------|--|
| Detector                | Peak / Quasi peak                          |
| Sweep time              | Auto                                       |
| Resolution bandwidth    | F < 150 kHz: 200 Hz<br>F > 150 kHz: 9 kHz  |
| Video bandwidth         | F < 150 kHz: 1 kHz<br>F > 150 kHz: 100 kHz |
| Span                    | 9 kHz to 30 MHz                            |
| Trace mode              | Max hold                                   |
| Test setup              | See sub clause 6.2 A                       |
| Measurement uncertainty | See sub clause 8                           |

### Limits:

## 11.11 Spurious emissions radiated 30 MHz to 1 GHz

### Description:

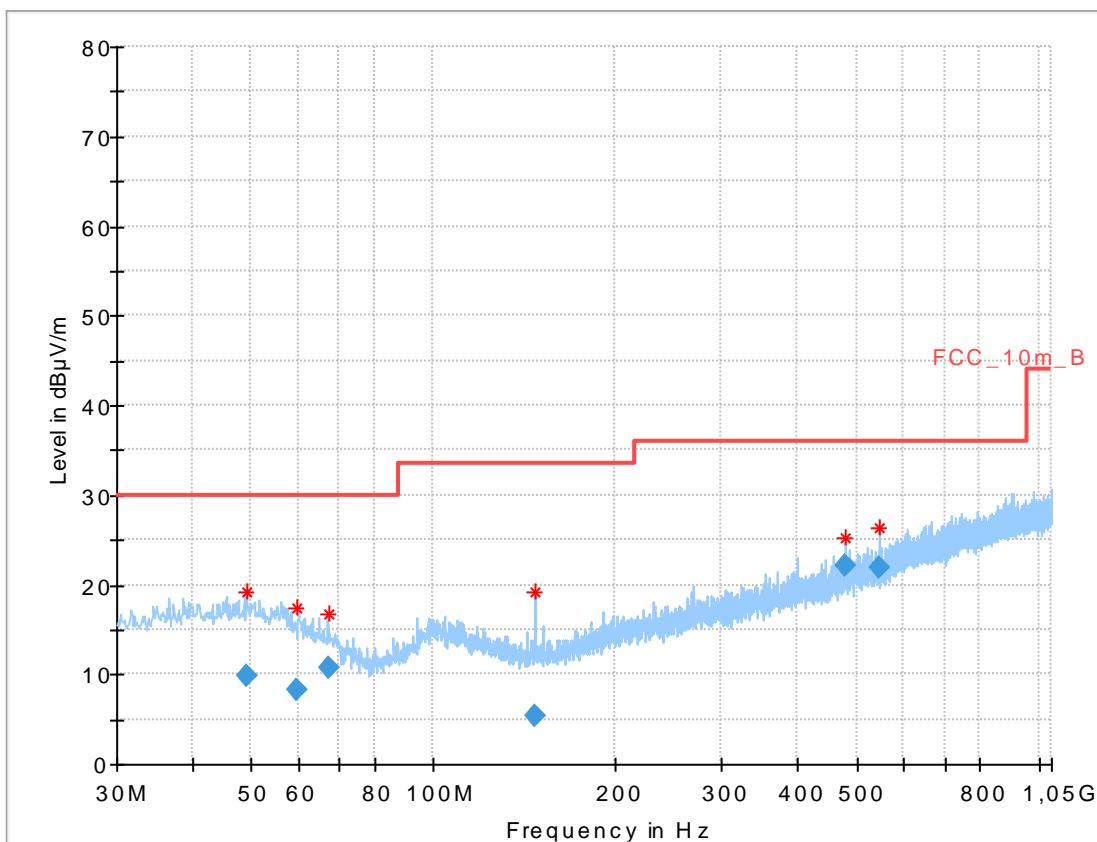

Measurement of the radiated spurious emissions in transmit mode. The EUT is set to single channel mode and the transmit channel is channel 00, channel 39 and channel 78. The measurement is performed in the mode with the highest output power.

| Measurement parameters  |   |
|-------------------------|---|
| Detector                | Peak / Quasi Peak   |
| Sweep time              | Auto  |
| Resolution bandwidth    | 120 kHz   |
| Video bandwidth         | 3 x RBW   |
| Span                    | 30 MHz to 1 GHz   |
| Trace mode              | Max hold  |
| Measured modulation     | <input checked="" type="checkbox"/> GFSK <input type="checkbox"/> Pi/4 DQPSK <input type="checkbox"/> 8DPSK |
| Test setup              | See sub clause 6.1 A  |
| Measurement uncertainty | See sub clause 8  |

The modulation with the highest output power was used to perform the transmitter spurious emissions. If spurious were detected a re-measurement was performed on the detected frequency with each modulation.

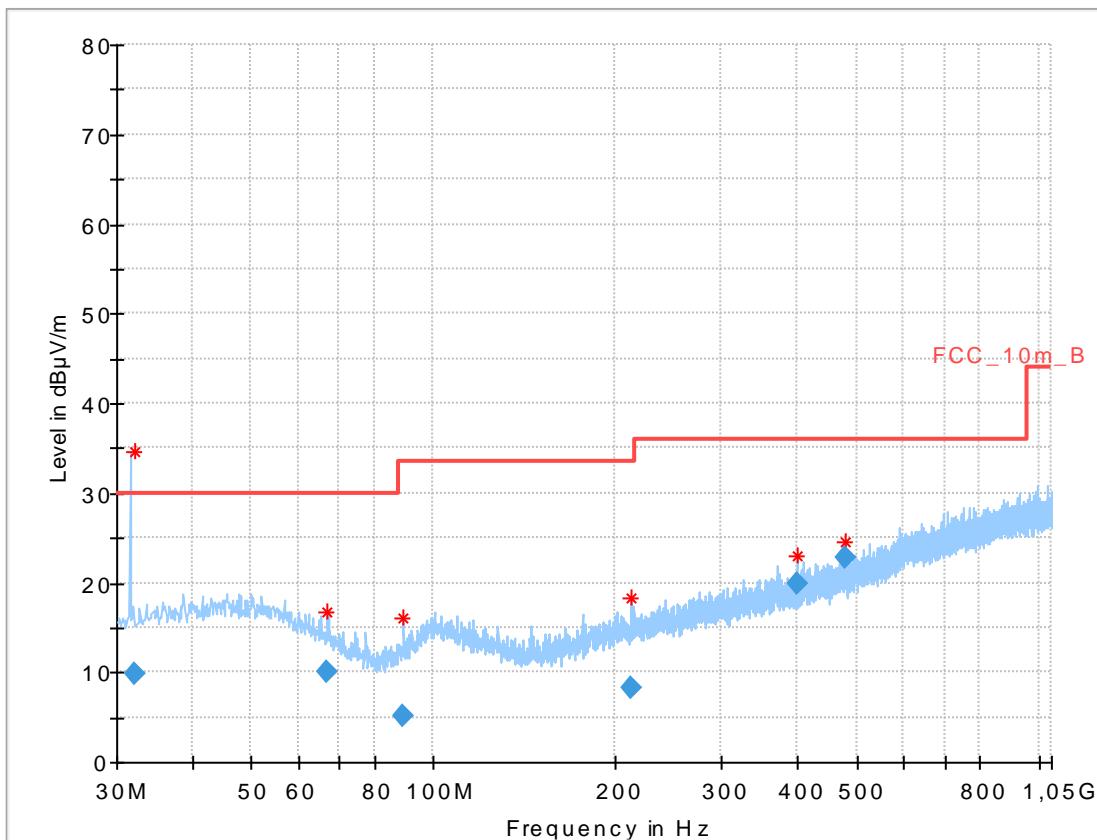

### Limits:

| TX spurious emissions radiated   |                               |                          |                               |                          |         |      |    |          |      |    |           |      |    |           |      |   |
| In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)). |                               |                          |                               |                          |         |      |    |          |      |    |           |      |    |           |      |   |

## 11.12 Spurious emissions radiated above 1 GHz

### Description:

Measurement of the radiated spurious emissions in transmit mode. The EUT is set to single channel mode and the transmit channel is channel 00, channel 39 and channel 78. The measurement is performed in the mode with the highest output power.

| Measurement parameters  |   |
|-------------------------|---|
| Detector                | Peak / RMS  |
| Sweep time              | Auto  |
| Resolution bandwidth    | 1 MHz   |
| Video bandwidth         | 3 x RBW   |
| Span                    | 1 GHz to 26 GHz   |
| Trace mode              | Max hold  |
| Measured modulation     | <input checked="" type="checkbox"/> GFSK <input type="checkbox"/> Pi/4 DQPSK <input type="checkbox"/> 8DPSK |
| Test setup              | See sub clause 6.2 A (1 GHz - 18 GHz)<br>See sub clause 6.3 A (18 GHz - 26 GHz)                             |
| Measurement uncertainty | See sub clause 8  |

The modulation with the highest output power was used to perform the transmitter spurious emissions. If spurious were detected a re-measurement was performed on the detected frequency with each modulation.

### Limits:

| FCC  | IC                            |                          |
|--|-------------------------------|--------------------------|
| TX spurious emissions radiated   |                               |                          |
| In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)). |                               |                          |
| §15.209  |                               |                          |
| Frequency (MHz)  | Field strength (dB $\mu$ V/m) | Measurement distance (m) |
| Above 960  | 54.0                          | 3                        |

**Results:** Transmitter mode

| TX spurious emissions radiated [dB $\mu$ V/m]               |          |                      |          |          |                      |          |          |                      |
|---|----------|----------------------|----------|----------|----------------------|----------|----------|----------------------|
| 2402 MHz  |          |                      | 2441 MHz |          |                      | 2480 MHz |          |                      |
| F [MHz]   | Detector | Level [dB $\mu$ V/m] | F [MHz]  | Detector | Level [dB $\mu$ V/m] | F [MHz]  | Detector | Level [dB $\mu$ V/m] |
| All detected emissions are more than 20 dB below the limit. |          |                      |          |          |                      |          |          |                      |
| 2825.5  | Peak     | 38.6                 | 2825.7   | Peak     | 47.2                 | 2825.7   | Peak     | 39.6                 |
|   | AVG      | 26.8                 |          | AVG      | 31.0                 |          | AVG      | 27.3                 |
| -/-   | Peak     | -/-                  | -/-      | Peak     | -/-                  | -/-      | Peak     | -/-                  |
|   | AVG      | -/-                  |          | AVG      | -/-                  |          | AVG      | -/-                  |
| -/-   | Peak     | -/-                  | -/-      | Peak     | -/-                  | -/-      | Peak     | -/-                  |
|   | AVG      | -/-                  |          | AVG      | -/-                  |          | AVG      | -/-                  |

\*) Average emission adjusting factor:

$$F = 20 * \log (dwell\ time / 100\ ms)$$

The dwell time of the longest possible Bluetooth transmission (DH5-packet) is 3.125 ms.

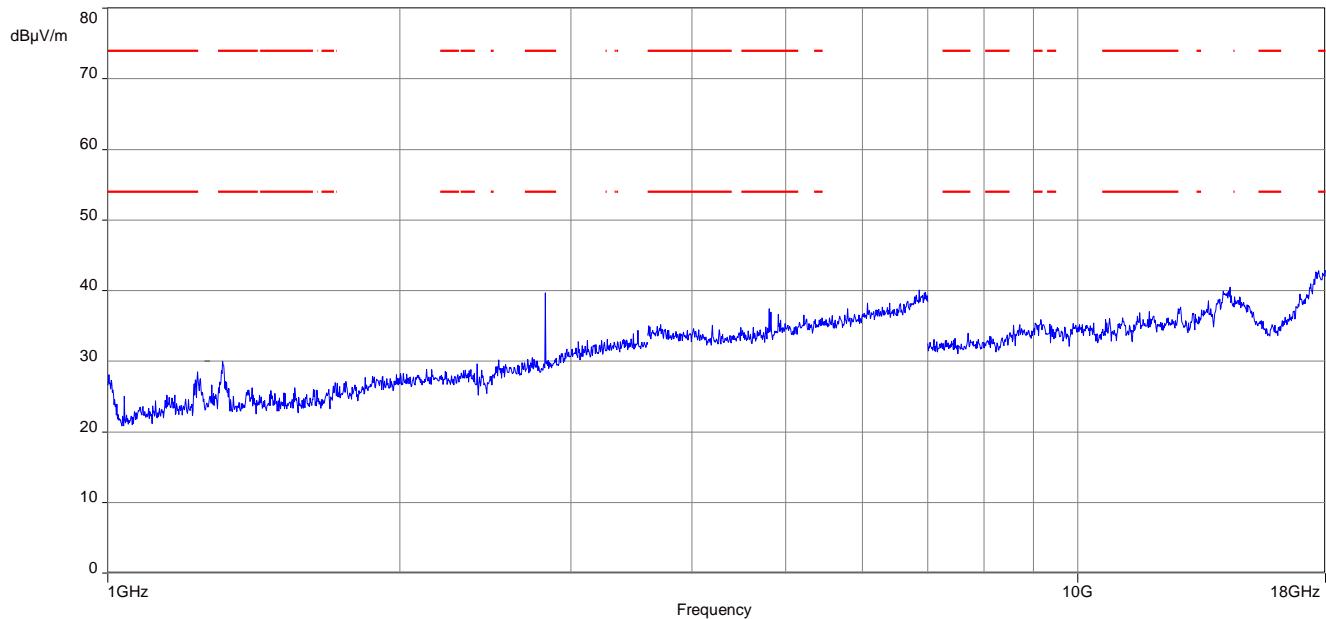

In a period of 100 ms, we have a maximum of 1 transmission and that implies a correction factor for spurious measurement emissions:

$$F = 20 * \log (1 * 3.125 / 100) = -30.1\ dB$$

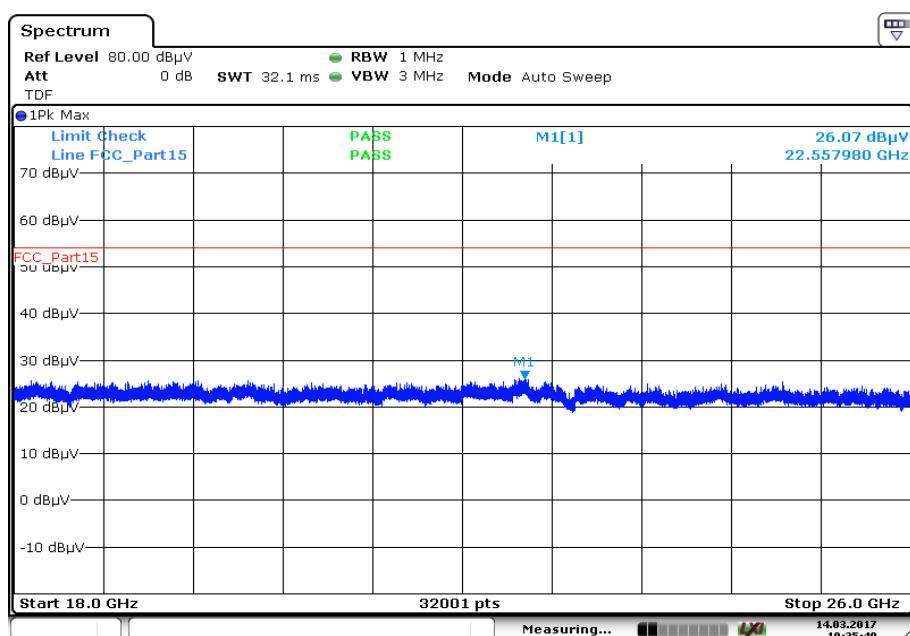

**Results:** Receiver mode

| RX spurious emissions radiated [dB $\mu$ V/m]               |          |                      |
|---|----------|----------------------|
| F [MHz]   | Detector | Level [dB $\mu$ V/m] |
| All detected emissions are more than 20 dB below the limit. |          |                      |
| -/-   | Peak     | -/-                  |
|   | AVG      | -/-                  |

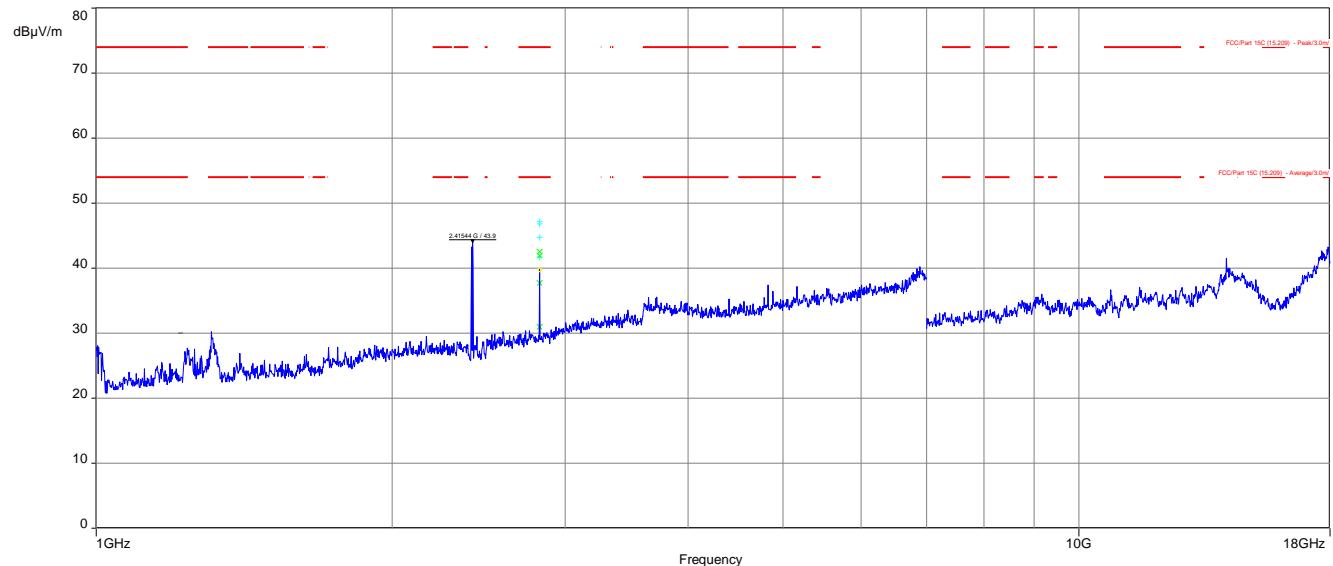

**Note:** The limit was recalculated with 20 dB / decade (Part 15.31) for all radiated spurious emissions 30 MHz to 1 GHz from 3 meter limit to a 10 meter distance. (40dB/decade for emissions < 30MHz)

**Plots:** Transmitter mode**Plot 1:** 1 GHz to 18 GHz, TX mode, channel 00, vertical & horizontal polarization

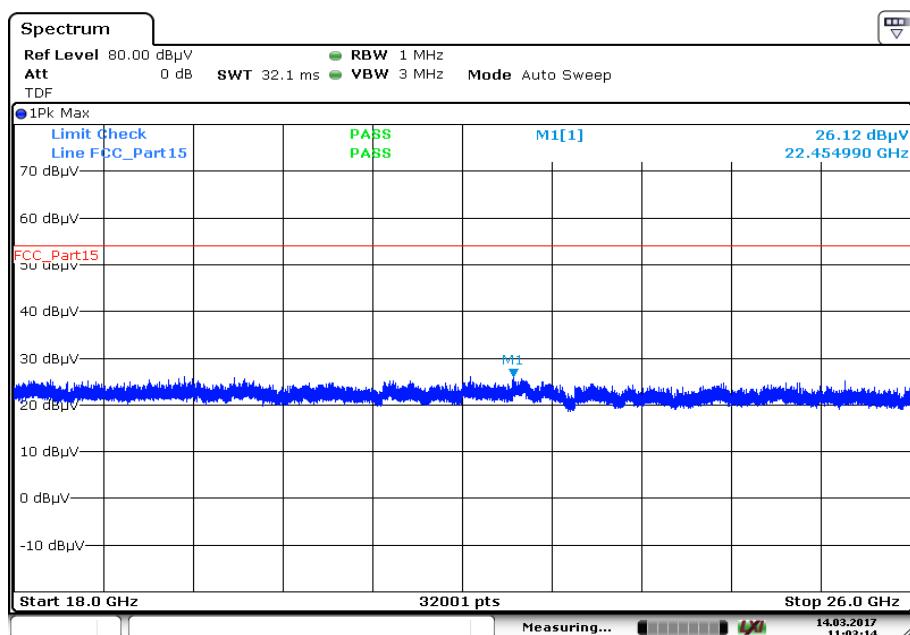

The carrier signal is notched with a 2.4 GHz band rejection filter.

**Plot 4:** 18 GHz to 26 GHz, TX mode, channel 00, vertical & horizontal polarization

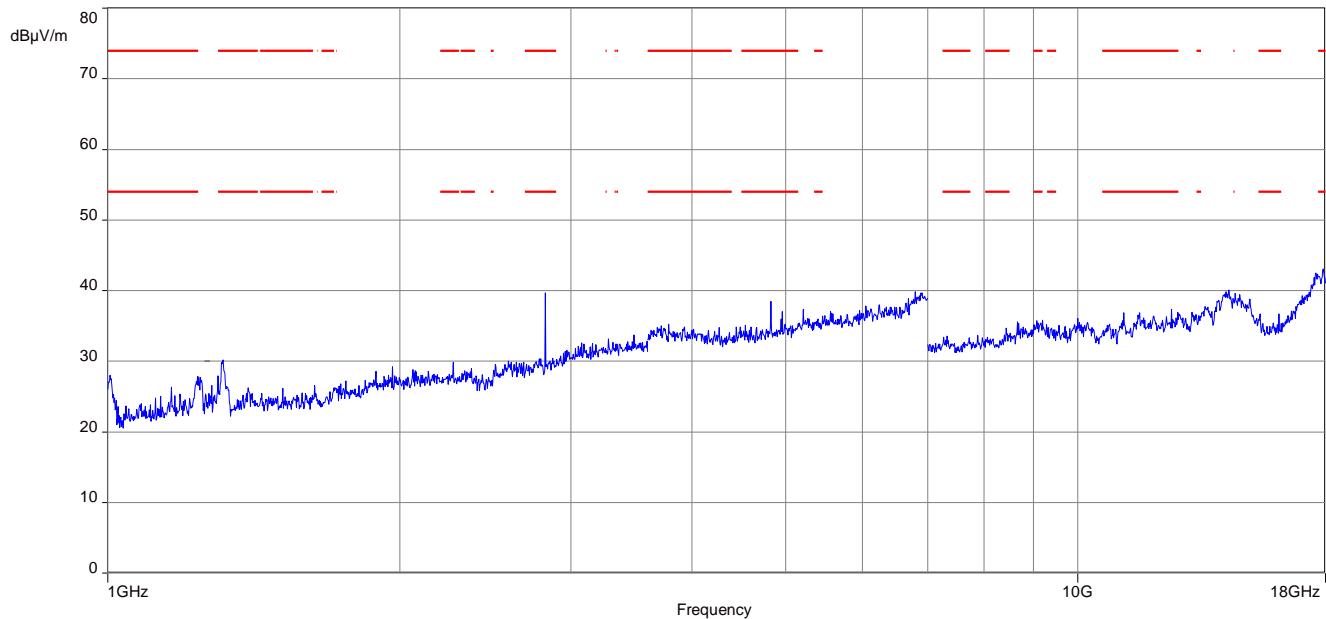

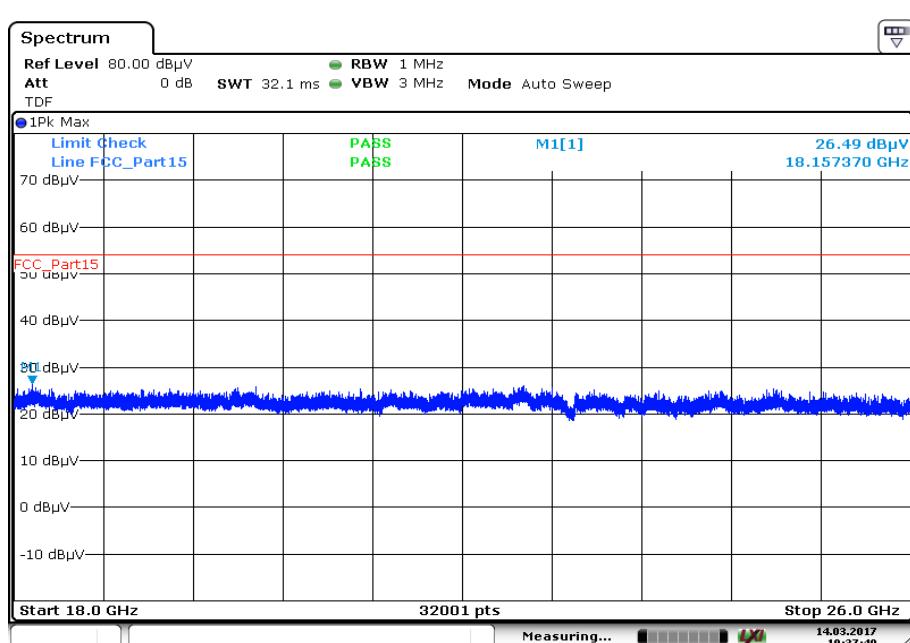

Date: 14.MAR.2017 10:35:50

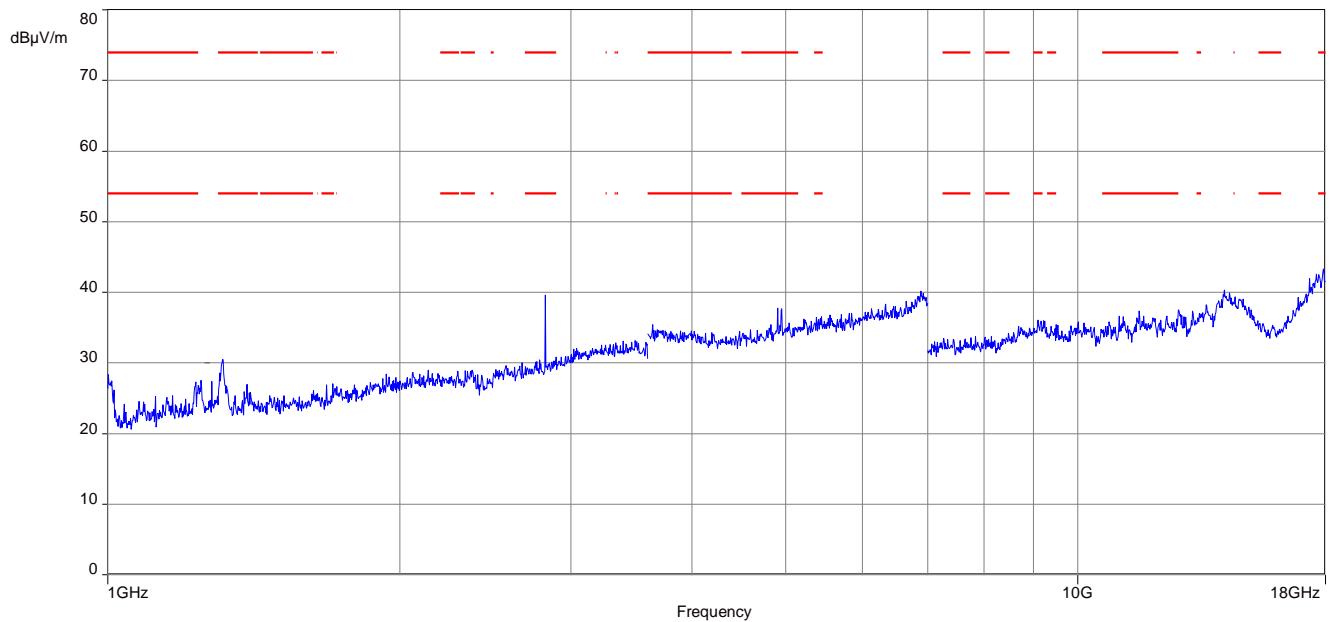

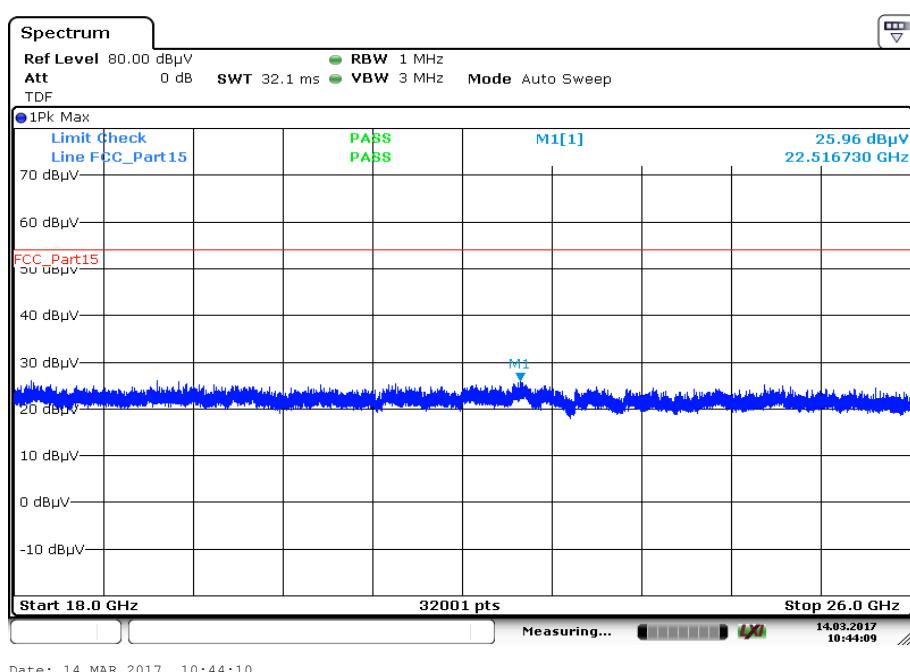

**Plot 5:** 1 GHz to 18 GHz, TX mode, channel 39, vertical & horizontal polarization

The peak at 2415 MHz is caused by a strong downlink of the signaling unit, falls inside the band and is not rated.  
 The carrier signal is notched with a 2.4 GHz band rejection filter.

**Plot 8:** 18 GHz to 26 GHz, TX mode, channel 39, vertical & horizontal polarization

Date: 14.MAR.2017 11:03:14

**Plot 9:** 1 GHz to 18 GHz, TX mode, channel 78, vertical & horizontal polarization**Plot 12:** 18 GHz to 26 GHz, TX mode, channel 78, vertical & horizontal polarization

**Plots:** Receiver mode**Plot 1:** 1 GHz to 18 GHz, RX / idle – mode, vertical & horizontal polarization**Plot 2:** 18 GHz to 26 GHz, RX / idle – mode, vertical & horizontal polarization

## 12 Observations

No observations except those reported with the single test cases have been made.

Deutsche Akkreditierungsstelle GmbH

Beliehene gemäß § 8 Absatz 1 AkkStelleG i.V.m. § 1 Absatz 1 AkkStelleGBV  
Unterzeichnerin der Multilateralen Abkommen  
von EA, ILAC und IAF zur gegenseitigen Anerkennung

Akkreditierung 

Die Deutsche Akkreditierungsstelle GmbH bestätigt hiermit, dass das Prüflaboratorium

CTC advanced GmbH  
Untertürkheimer Straße 6-10, 66117 Saarbrücken

die Kompetenz nach DIN EN ISO/IEC 17025:2005 besitzt, Prüfungen in folgenden Bereichen  
durchzuführen:

Funk  
Mobilfunk (GSM / DCS) + OTA  
Elektromagnetische Verträglichkeit (EMV)  
Produktsicherheit  
SAR / EMF  
Umwelt  
Smart Card Technology  
Bluetooth®  
Automotive  
Wi-Fi-Services  
Kanadische Anforderungen  
US-Anforderungen  
Akustik  
Near Field Communication (NFC)

Die Akkreditierungsurkunde gilt nur in Verbindung mit dem Bescheid vom 25.11.2016 mit der  
Akkreditierungsnummer D-PL-12076-01 und ist gültig bis 17.01.2018. Sie besteht aus diesem Deckblatt,  
der Rückseite des Deckblatts und der folgenden Anlage mit insgesamt 63 Seiten.

Registrierungsnummer der Urkunde: D-PL-12076-01-01

Frankfurt, 25.11.2016  
Siehe Hinweise auf der Rückseite

Im Auftrag Dipl.-Ing. Ulf Ralf Egner  
Abteilungsteuer

Deutsche Akkreditierungsstelle GmbH

Standort Berlin  
Spittelmarkt 10  
10117 Berlin

Standort Frankfurt am Main  
Europa-Allee 52  
60327 Frankfurt am Main

Standort Braunschweig  
Bundesallee 100  
38116 Braunschweig

Die auszugsweise Veröffentlichung der Akkreditierungsurkunde bedarf der vorherigen schriftlichen  
Zustimmung der Deutsche Akkreditierungsstelle GmbH (DAkkS). Ausgenommen davon ist die separate  
Weiterverbreitung des Deckblattes durch die umseitig genannte Konformitätsbewertungsstelle in  
unveränderter Form.

Es darf nicht der Anschein erweckt werden, dass sich die Akkreditierung auch auf Bereiche erstreckt,  
die über den durch die DAkkS bestätigten Akkreditierungsbereich hinausgehen.

Die Akkreditierung erfolgte gemäß des Gesetzes über die Akkreditierungsstelle (AkkStelleG) vom  
31. Juli 2009 (BGBl. I S. 2625) sowie der Verordnung (EG) Nr. 765/2008 des Europäischen Parlaments  
und des Rates vom 9. Juli 2008 über die Vorschriften für die Akkreditierung und Marktüberwachung  
im Zusammenhang mit der Vermarktung von Produkten (Abl. L 218 vom 9. Juli 2008, S. 30).  
Die DAkkS ist Unterzeichnerin der Multilateralen Abkommen zur gegenseitigen Anerkennung der  
European co-operation for Accreditation (EA), des International Accreditation Forum (IAF) und  
der International Laboratory Accreditation Cooperation (ILAC). Die Unterzeichner dieser Abkommen  
erkennen ihre Akkreditierungen gegenseitig an.

Der aktuelle Stand der Mitgliedschaft kann folgenden Webseiten entnommen werden:  
EA: [www.european-accreditation.org](http://www.european-accreditation.org)  
ILAC: [www.ilac.org](http://www.ilac.org)  
IAF: [www.laf.nu](http://www.laf.nu)
